

SpringCharts TemplateWare™

SpringCharts TemplateWare is a powerful add-on system for specialists that saves time and facilitates more complete patient documentation with a minimum of effort. Developed in partnership with skilled practitioners, SpringCharts TemplateWare is much more than the static "templates" that are commonly offered by competing EMRs.

Instead, SpringCharts TemplateWare is a customizable system built upon a comprehensive knowledgebase of information tailored to each specialty. This information is accessible within SpringCharts in the form of pre-built Office Visits, Orders and Letters, as well as PopUp Mini-Templates. And unlike static templates that often require a programmer to update or change, our TemplateWare enables point-and-click creation and editing of new templates and mini-templates on the fly. You can even save a recent office visit as a template for future re-use.

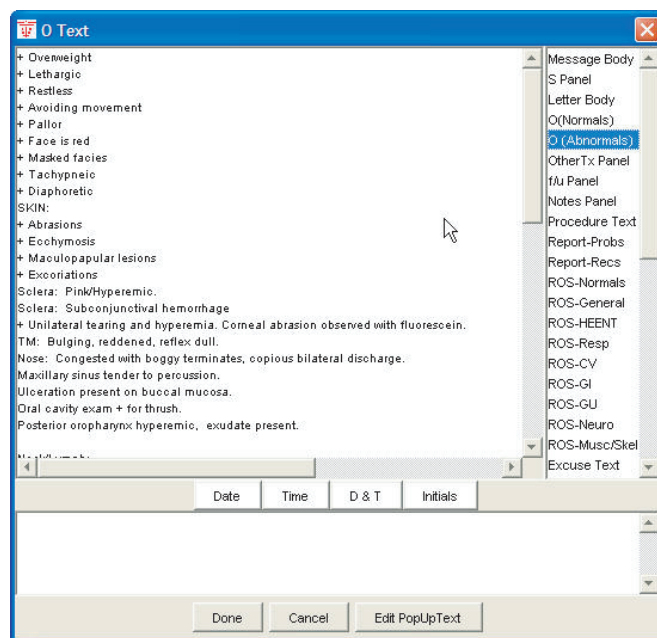

Example of Office Visit Template List (Partial)

TemplateWare Components:

- ◆ **Templates:** Pre-built templates of common office visits, orders & letters for each specialty
- ◆ **PopUp Mini-Templates:** Key words, phrases & sentences for each specialty accessible via context-specific PopUp windows
- ◆ **Template Editor:** Create and edit your own templates
- ◆ **Office Visit Copy to Template:** Create templates as you chart by saving an office visit as a template for future re-use

Initial Specialties:

- ◆ Family Practice
- ◆ Pediatrics
- ◆ Internal Medicine
- ◆ Psychiatry
- ◆ Pulmonary Medicine
- ◆ Gastroenterology
- ◆ Many More in Progress
